

SOFSPOT®

Gets the Soil, Preserves the Garment™

SOFSPOT works safely on silk, rayon, wool, linen, cotton & other sensitive fabrics.

Stain Remover for Water-Soluble Stains on Sensitive Fabrics

SOFSPOT® is a safe and effective stain remover for water-soluble stains on delicate fabrics. SOFSPOT protects garments from the damaging effects of moisture remaining in fabrics after wet-side spotting.

Removing stains from sensitive fabrics like silk, rayon, wool, linen, and cotton can be a challenge. Color damage can result from the pH or moisture in stain removal agents, or even water from the steam gun. Other damage, such as rings, localized redeposition and more can occur if moisture remains in the treated area when it is drycleaned.

Care should always be taken when attempting to remove stains from sensitive fabrics. Now the job is easier with SOFSPOT, specifically formulated to minimize the problems associated with wet-side stain removal.

- **Removes Stains Quickly**

SOFSPOT contains a powerful wetting agent for rapid penetration of the stained area and faster stain removal.

- **Safe for pH Sensitive Fabrics**

Colors on silk and rayon fabrics can be pH sensitive, leading to damage by acidic or alkaline stain removers. SOFSPOT is neutral, so it will remove stains safely without damaging the color.

- **Minimizes Dye-Bleeding at the Spotting Board**

Moisture sensitive dyes can bleed when exposed to stain removers that contain moisture. SOFSPOT's formulation removes water-soluble stains, like food and perspiration, while minimizing dye bleeding at the spotting board.

- **Prevents Costly Recleans**

Prespotting with SOFSPOT delivers more stain-free garments after drycleaning to save extra handling. This can be especially important when a short running time is used to protect a fragile garment or trim.

- **Helps Prevent Localized Redeposition**

SOFSPOT has outstanding lubrication and soil dispersion properties to help prevent redeposition and aid in the removal of loosened soils from the fabric.

- **Controls Fabric Moisture**

To sensitive fabrics, moisture can damage in the drycleaning bath. Areas where residual moisture remains after spotting will attract impurities like insoluble soil and dyes to cause localized discoloration or redeposition. Light-colored soft wools and cottons are especially susceptible. In addition, uncontrolled moisture can result in rings, color loss, shrinkage, pilling, or excessive wrinkling of other susceptible fabrics. SOFSPOT contains a powerful leveling agent that provides needed moisture management when the detergent type or concentration is inadequate.

All ingredients are biodegradable. Contains no Proposition 65 listed ingredients or halogenated compounds. Designed to comply with California 2013 VOC regulations.

Instructions for Using SOFSPOT®

SOFSPOT is designed for stain removal on delicate fabrics like silk, linen, rayon, wool & cotton. It aids in the removal of water-soluble stains like:

**Foods
Beverages
Perspiration**

SOFSPOT is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.

For Sensitive Fabric Pre-Spotting at the Spotting Board

1. Apply SOFSPOT directly to fabric. Completely saturate stained area.
2. Work into the stain by lightly tamping with a dry-side brush or work gently into stain with spatula. Never scrub silk or rayon.
3. When soil is loosened from fabric, dryclean as normal. SOFSPOT is designed to remain on the fabric prior to drycleaning, so that you can machine-rinse spotted garments. Therefore, do not flush, rinse or dry prior to drycleaning.

To Control Moisture During Drycleaning Process (Leveling)

The problems caused by drycleaning fabrics that contain moisture from pre-spotting can be overcome by using SOFSPOT. Using a technique called leveling, it works by controlling the moisture that remains from wet-side stain removal procedures after the spotted area has been rinsed and air-dried with the spotting gun.

When used as a leveling agent, SOFSPOT can help prevent shrinkage, ring formation, pilling and discoloration.

1. Use wet-side pre-spotter, such as StreePRO® or StreeTAN®. See the respective catalog pages or www.4streets.com for complete details.
2. After fabric has been rinsed and air dried with the spotting gun, apply SOFSPOT on the spotted areas.
3. Lightly tamp the treated area, including fabric area just outside of ring. Do not flush, rinse or dry.
4. Dryclean as normal.

How to Order SOFSPOT

SOFSPOT is sold by authorized Street's distributors everywhere. Order SOFSPOT from your local distributor in single one-gallon containers or in cases of four.

Specially labeled spotting bottles are available from your distributor..

Before using any chemical product, review the Material Safety Data Sheet (MSDS) for safe handling and proper disposal.

For professional drycleaning use only.
